

What is screening?

Screening checks to see if there is disease in people who do not have symptoms.

What is lung cancer screening?

Lung cancer screening can find lung cancer early, when it can be more easy to treat and may be cured.

go2foundation.org

Lung cancer screening should only be done at a center that knows how to do it, like a **GO2 Foundation for Lung Cancer Center of Excellence.**

Contact **GO2 Foundation for Lung Cancer** to learn more about screening and find out where to get a low-dose CT scan.

What is lung cancer screening?

Empower Everyone. Ignore No One.

go2foundation.org

Lung Cancer Screening:

Uses a low dose CT scan

Takes about 15 minutes

No needles are used

Medicare and most private insurance pays for lung cancer screening. Medicaid also covers screening in SOME states.

Is Lung Cancer Screening Right For You?

Are you **50** or older?

AND

Do you smoke now? Or, if you quit, was it in the last 15 years?

AND

Smoke (or did you smoke) at least 1 pack a day for 20 years OR 2 packs a day for 10 years?

If you answer yes to all of these, you may be able to get screened.

Other Things To Know:

- For most people, screening is done once a year.
- Screening might find spots in the lung, called nodules.
- Like with skin moles, most lung nodules are not cancer and will never become lung cancer.
- Also like moles, it is a good idea to watch nodules over time to see if they grow or change.

Talk to a doctor to see if screening is right for you.

You will need a written order to get a scan.
